- HOBBY FOR WORLD WIDE COMMUNICATIONS
- RADIO COMMUNICATIONS WHILE TRAVELING
- SUPPORT FOR LOCAL EVENTS
- EDUCATION IN BASIC ELECTRONICS AND RADIO WAVE PHENOMENA

Spring Technician Class

I have had several inquiries about teaching another Zoom Technician radio licensing class this spring so I thought I would put it out there and see what the interest would be. As in my last class the media will be on Zoom Video two evenings a week.

Tuesday and Thursday from 6:30 to about 7:45.

Starting March 2nd 2021 thru March 30 2021 with the omission of the 11th.

This gives about an hour of class with 15 minutes of discussion. The classes are not designed give just questions and answers. You have many other resources for that. The classes focus is on how to study for the test and how to take the test. The classes will teach what to look for in the test questions. You will learn the rules and regulations so once you get licensed you know what can and cannot be done on the radio. Procedures for accessing the many repeater and internet VOIP systems with your new license will be discussed. On the technical side, a bit of radio, propagation, antenna theory and simple electronics will be addressed to allow you to comfortably set up your own personal radio equipment. You will also meet a personal group of friends in which to share the hobby and ask questions.

Your commitment is, a weekly review of the material and the weekly study of selected questions from the published question pool.

If you think you might be interest , or have questions, contact me.
